POTS

AN ALL-IN-ONE POTS REPLACEMENT SOLUTION

SPECIFICATIONS

Connect with broadband and/or 4G LTE.
Cellular can be primary connectivity if broadband is not available.
Can support 2-16 lines per box.

REDUNDANCY

Broadband and Cellular provides fail-over protection. Up to 24 hour battery backup.

FULLY MANAGED

24/7/365 NOC with monitoring alerts.
Remote firmware upgrades and break/fix emergency replacement.

TURNKEY SOLUTION

Atlantech Online provides the equipment, ports phone numbers or assigns new numbers and can perform professional installation.

PLAIN OLD TELEPHONE SERVICE (POTS) REPLACEMENT

Carriers have been granted permission by the FCC to retire the copper line infrastructure known as POTS lines. Business and government are losing access to the phone lines that provide service to seamless communication across critical applications like fire alarms, security systems, fax, elevators and more. Even where POTS IS still available, prices have increased 100 to 1000% and service has been degraded. Maintenance on existing infrastructure has ceased.

POTS in a Box represents a significant evolution in telecommunications, addressing the challenges posed by the obsolescence of copper networks and offering enhanced reliability, flexibility, and cost-effectiveness. **Our ability to integrate with both legacy and modern systems makes it an essential solution in today's rapidly changing telecommunications landscape.** POTS in a Box enables you to completely transform all traditional POTS services and increase reliability while lowering costs.
