Mobile Unified Communications

Mobile-enable your communications

- **atlantech|wireless** is a mobile communications service integrated with Atlantech's Cisco BroadWorks Unified Communications (UC) platform.

- Universal corporate SIM that works globally.

- Unique native mobile phone features – use any native dialer for business calls.

- Mobile phones become extensions on the corporate UC network.

- Self-service portal gives you control over mobile voice, messaging and data service usage.

- Call recording & policy compliance.

- Native mobile network performance, quality and security.

- No mobile app required.

- Unique ability to use all major cellular carriers towers.

- One cell phone for both personal and business use.

- Perfect for home working, teleworking and remote workforce programs.

atlantech|wireless is a turnkey service that enables mobile devices to be used as native extensions on our Cisco BroadWorks platform. Your business can now have its own private mobile phone network.

atlantech|wireless is based on a SIM integrated with a cloud-based mobile network. Mobile devices connect directly to our UC platform. For the mobile workforce, services are presented via the standard mobile phone interface, so no separate UC app is required.

You can even monitor and record calls for compliance, records retention and quality assurance. Now you can maximize the productivity and communications efficiency of your workforce no matter where they are.
